Fieldbridge Associates LLC

Phone: 718-756-2400

Address: 1720 Bedford Ave
Brooklyn, NY 11225

Website: <https://www.crunchbase.com/organization/fieldbridge-associates-llc>

Fieldbridge Associates LLC is a Brooklyn-based organization, which was operating for approximately 32 years primarily in the Apartment Building Operators business / industry within the Real Estate sector. The Fieldbridge Associates LLC has approximately 60 employees at this single location.

The H-Shaped housing complex, Ebbets Field Apartments, located on the western edge of Brooklyn's Crown Heights neighborhood on the former site of Ebbets Field is owned by Fieldbridge Associates LLC. This complex was built in the 1960's. The housing complex disposes of large studios, along with 1, 2 & 3 Bedroom apartments. Many of the units have balcony. The units located on the west side of the building have views of Prospect Park, the statue of liberty and the Manhattan skyline.

*Fieldbridge Associates LLC's main focus is to provide all residents with high standards of service, 24 hour security, and onsite maintenance and porter staff. Children's playgrounds, onsite parking garages and state of the art laundry rooms, are some of the onsite amenities of the housing complex. This organization has a **rich portfolio of housing complexes.***

Types apartments

FLAT: Experts from Fieldbridge Associates LLC explain that this is an apartment built inside a building, with a structure of noble material or cement plates, with a view of the street, or an interior view. The measures are not established, they can be 100 m2 or less, up to about 250 m2. The distribution of rooms, living room, dining room, holl, bathrooms and even the laundry occupy a single floor.

DUPLEX: As its name says, it is an apartment that has two floors or two levels, where the distribution of the environments changes: On the first floor is the living room, dining room, kitchen, laundry; and on the second floor, which is connected by means of a staircase, are the rooms, bathrooms, holl.

LOFT: From Fieldbridge Associates LLC share that these buildings are not exactly apartments, because the structure and model are very different from an average apartment. We would say that the loft model was created in the 1950s in the US, after an industrial crisis began, families began to take advantage of industrial department stores and adapt it for housing, because it was much cheaper to live in those spaces. These warehouses had high ceilings, huge, undivided spaces, large windows for plenty of lighting, and the architecture was simply linear; that is the true model or structure of a loft. Today they are expensive and luxurious homes, with a simple decoration, with furniture and objects that do not take up much space, for those who want to enjoy spacious spaces with lots of lighting.

PENTHOUSE: According to Fieldbridge Associates LLC, this type of housing is usually located on the top floor of the buildings. Also the model arises in the US, because many people were looking for cheap places to live, they began to adapt the terraces in houses to be rented. They are constructions with a brick structure and the entire terrace is used; They are generally two stories high, their ceilings are light - wooden structure - with large windows with panoramic views of the entire city, they are also expensive and luxurious homes.
